AI Job Hunting & Application Assistant

Job Data Sources, APIs & Company Career Pages

Purpose: India-first job discovery with the broadest practical coverage across startups, MSMEs, large Indian companies and multinational employers.

Document status: Initial source inventory for feasibility review. Inclusion does not mean that an API is free, unrestricted, or already integrated.

Core principle

Collect jobs from multiple permitted sources, normalize them into one database, deduplicate repeated listings, check freshness, and direct users to the original application page.

Prepared as a working reference for product planning

1. Collection Strategy

The platform should use multiple source types rather than depending on one job-search API. The goal is broad coverage, while preserving source attribution, listing freshness and access compliance.

Source layers

• Aggregator APIs: search across multiple employers where provider coverage and terms permit.

• ATS/public job-board endpoints: collect published vacancies from companies using supported systems.

• Official company career pages: discover and monitor employers directly where permitted.

• Company discovery channels: use public company directories and startup ecosystems to discover smaller or lesser-known employers.

• Sector-specific sources: cover IT, finance, manufacturing, healthcare, retail, logistics, education, hospitality, sales and other sectors.

Important: Finding a career page does not itself confirm permission or technical ability to collect its data. Each source needs an access-method and terms review.

2. Job Aggregator APIs & Portals

Provider	Link	Potential use / validation needed
Adzuna API	Developer portal	Aggregated job search. Test India coverage, quotas, pricing and reuse terms.
Jooble	API documentation	Multi-employer job search. Confirm API access and commercial-use conditions.
Careerjet	Careerjet website	Job search source; investigate API availability, key requirements and India results.
JSearch	RapidAPI listing	Third-party aggregated search; validate provider, price, coverage and terms.
National Career Service (NCS)	Official website	India-focused job portal. Confirm whether an authorized integration/feed is available.
LinkedIn Jobs	Jobs	Potential discovery source; do not assume unrestricted public API or scraping access.
Naukri	Official website	Major Indian job portal; verify approved integration/access route.
Indeed India	Official website	Job discovery candidate; verify partner/API and reuse permissions.
Foundit	Official website	Job discovery candidate; verify approved data access.
Apna	Official website	India-focused jobs, including frontline roles; verify integration/access terms.
Wellfound	Official website	Startup hiring and company discovery; confirm permitted data access.

3. ATS & Recruitment Platforms

ATS platforms are not universal job-search engines. Their public job-board endpoints typically cover the specific employer boards hosted on that platform. Board identifiers and applicable terms still matter.

Platform	Reference	Integration notes
Greenhouse	Job Board API	Public job-board GET endpoints can expose published jobs for a company's board; identify board token.

Platform	Reference	Integration notes
Lever	Postings API	Retrieve published postings for a Lever-hosted employer board.
Ashby	Public Job Posting API	Public endpoint for an organization's published postings.
SmartRecruiters	Platform	Investigate public postings endpoints and applicable terms.
Workday	Platform	Company-specific career endpoints; access method varies by employer.
Workable	Platform	Public widgets/feeds or authorized API access; some APIs require credentials.
Recruitee	Platform	Check public career site/feed support and terms.
Personio	Platform	Check public XML/feed or authorized access.
Teamtailor	Platform	Check public jobs/feed availability.
Breezy HR	Platform	Check public career listings and terms.
Rippling	Platform	Investigate public board access where applicable.

4. Indian IT Services & Consulting

4A. Indian IT Services & Consulting

Company	Official website / career page

5. Smaller Companies & Startup Discovery

Source	Link	Purpose / caveat
Startup India	Official portal	Discover Indian startups and ecosystem resources; verify data access and reuse terms.
Wellfound	Official website	Startup and hiring discovery; do not assume unrestricted job data access.

Source	Link	Purpose / caveat
Y Combinator Companies	Company directory	Discover startups; then identify each company's official careers source.
LinkedIn Jobs	Jobs	Discovery candidate; access routes and terms must be checked.
Naukri	Official website	Major Indian job portal; approved access needed.
Indeed India	Official website	Job portal; verify API/partner access and reuse terms.
Foundit	Official website	Job portal; verify integration route.
Apna	Official website	Useful to investigate frontline and local roles; verify access.

6. Recommended Job-Data Processing Pipeline

• Discover: find company names, official domains and likely career pages.

• Verify: confirm that a domain belongs to the employer; record the source and evidence.

• Identify access method: public ATS endpoint, official API, authorized feed, approved integration or permitted page parsing.

• Collect: fetch listings within rate limits and source terms.

• Normalize: map title, employer, location, work mode, requirements, dates and apply URL into one schema.

• Deduplicate: match on employer, normalized title, location, source job ID and application URL.

• Check freshness: record first seen, last seen and last successful check; flag likely expired postings.

• Publish: show source labels and link users to the original application page.

• Monitor: track source failures, coverage gaps and job counts by sector, location and company size.

7. Suggested Job Source Registry Fields

Field	What to store
company_name	Employer name as shown by the official source.
official_domain	Verified employer domain.
career_page_url	Exact hiring page URL, not merely the homepage when a careers page exists.
ats_platform	Greenhouse, Lever, Ashby, Workday, other, or unknown.
access_method	API, public board, authorized feed, partner integration, permitted parsing, or manual review.
permission_status	Not reviewed, approved, restricted, or unavailable.
sector / geography	Sector tags, states/cities and remote/hybrid/on-site scope.
last_sync_at / sync_status	Last successful sync time and success/failure reason.
coverage_notes	Known limitations, pagination, rate limits, source attribution requirements.

8. Risks & Validation Checklist

• Do not assume that a website offers a public API just because it has a careers page.

• Review API terms, robots.txt where relevant, rate limits, licensing and commercial redistribution permissions before integration.

• Avoid bypassing logins, CAPTCHAs, paywalls or technical access controls.

• Keep source attribution and the original application link where required.

• Use clear labels such as Source verified, Link checked, Potentially expired, Duplicate, or Needs review. Source verification does not guarantee that a job offer is genuine.

• Measure unique active jobs rather than raw collected records; a higher raw count can simply mean more duplicates.

• Validate each provider with a pilot across multiple Indian cities, sectors and company sizes before committing to paid plans.

9. Recommended Next Step

Turn this initial list into a source registry (CSV/Google Sheet or database table), then run a pilot audit on 50–100 diverse employers. For each source, record whether jobs were actually retrievable, whether access is permitted, how many unique active jobs were returned, how stale the results were, and how much duplication occurred. Expand the company list based on measured gaps.

This is a planning inventory, not a claim that every listed source has been tested or integrated. Some links lead to official company homepages because a precise career URL still needs to be identified and verified.
